Pneumonia	100.0%	⚠️ Abnormal	0.49s

==

================================== 📋 DIAGNOSTIC EXPLANATION REPORT Generated: 2026-07-14 16:59:57

🎯 MAIN FINDING

🔴 **Pneumonia** detected with **100.0%** confidence.

💡 INTERPRETATION

• The AI identified patterns consistent with pneumonia:

- Areas of opacity in the lung fields
- Possible consolidation or infiltration
- Air bronchogram signs may be present • This suggests possible infection or inflammation of the lungs.

📊 CONFIDENCE ASSESSMENT

Confidence Score: 100.0% **Severity Level:** 🟢 High Confidence - Strong evidence ✅ **High Confidence:** The model is very certain about this finding. The evidence is strong and consistent. • Multiple features support the diagnosis • Pattern recognition is clear and unambiguous

🔑 KEY FACTORS IN DECISION

• **Primary Diagnosis:** Pneumonia (100.0% confidence) • **Top 3 Differential Diagnoses:** 1. Pneumonia (100.0%) 2. Normal (0.0%) • **Clinical Features Identified:** • • Lung opacity in affected regions • • Airspace consolidation patterns • • Possible pleural effusion

📋 RECOMMENDATIONS

⚠️ Pneumonia detected with high confidence. Recommend immediate clinical correlation and specialist consultation.

🤖 MODEL INFORMATION

Model: VGG16 • **Accuracy:** 98.18% • **Training:** Transfer learning from ImageNet • **Architecture:** 16 layers with custom classification head • **Strengths:** Excellent generalization, robust performance
