== 📄 **DIAGNOSTIC EXPLANATION**

REPORT Generated: 2026-07-14 16:45:45

🎯 **MAIN FINDING**

✅ **Normal** - No significant abnormalities detected with **99.5%** confidence.

💡 **INTERPRETATION**

- The AI analysis shows normal anatomical structures:
- Clear lung fields with no significant opacities
- Normal heart silhouette and diaphragm contour
- No visible fractures or bone abnormalities
- No suspicious masses or lesions detected

CONFIDENCE ASSESSMENT

Confidence Score: 99.5% **Severity Level:** ● High Confidence - Strong evidence ✔ **High Confidence:** The model is very certain about this finding. The evidence is strong and consistent. • Multiple features support the diagnosis • Pattern recognition is clear and unambiguous

KEY FACTORS IN DECISION

• **Primary Diagnosis:** Normal (99.5% confidence) • **Top 3 Differential Diagnoses:** 1. Normal (99.5%) 2. Pneumonia (0.5%) • **Normal Findings:** • • Clear lung fields with no opacities • • Normal heart size and position • • Intact bone structures • • No suspicious masses or lesions

RECOMMENDATIONS

✔ Normal result. No immediate action required. Continue routine screening as recommended.

MODEL INFORMATION

Model: VGG16 • **Accuracy:** 98.18% • **Training:** Transfer learning from ImageNet • **Architecture:** 16 layers with custom classification head • **Strengths:** Excellent generalization, robust performance
